

Serial No.: 10/687,867
Atty. Docket No.: P67441US1

IN THE SPECIFICATION:

On page 12, please amend the last paragraph, beginning on line 15, as follows:

--A series of upstanding peripheral walls 82d are formed by the base 82 to define wells 85 for reception of complementary-shaped foot portions 100a on the tapered lower ends 100b of each hopper element 100. As will be seen particularly in Figure 12, with the housing 80 fully assembled, each of the hopper elements 100 can be individually and selective supported thereby by tilting the same in the manner shown in dotted lines at 100', with the foot portions 100a of the hopper element 100 seated within a well 85 in the base 82 and the aperture ~~114~~ 116 in the shoulder ~~116~~ 114 engaged over one of the fingers 94 on the support ring 92. Obviously, reversing that procedure enables removing the hopper element 100 from the housing 80 for refilling, replacement or cleaning.--
